

Amendments to the Claims

- 1       Claim 1 (original): A computer program product embodied on one or more computer-readable  
2       media, the computer program product adapted for providing an electronic calendar-driven  
3       application and comprising:  
4                    computer-readable program code means for creating calendar events on an electronic  
5                    calendar, the calendar events being organized according to a multi-level hierarchy comprising  
6                    context events at an upper level of the hierarchy and specific events at a lower level of the  
7                    hierarchy, wherein zero or more specific events may be scheduled on the electronic calendar  
8                    during any particular context event; and  
9                    computer-readable program code means for interrogating the calendar events created for a  
10          user to provide information about the user.
- 1        Claim 2 (original): The computer program product according to Claim 1, further comprising  
2        computer-readable program code means for automatically applying a default context during  
3        calendar periods when no other context event is active.
- 1        Claim 3 (original): The computer program product according to Claim 1, further comprising:  
2                    computer-readable program code means for detecting an incoming electronic mail  
3                    message for the user; and  
4                    wherein the computer-readable program code means for interrogating further comprises:  
5                    computer-readable program code means for determining whether the user's calendar

6 indicates that he is currently available for checking his electronic mail, and if not, generating an  
7 automated response informing a sender of the electronic mail message of the user's current status  
8 using a currently-active context event for the user and, for particular context events, any  
9 currently-active specific event for the user.

1 Claim 4 (original): The computer program product according to Claim 3, wherein the automated  
2 response further comprises information regarding when the user is next available.

1  Claim 5 (original): The computer program product according to Claim 1, further comprising:

2 computer-readable program code means for detecting an incoming instant message or  
3 request for instant messaging status for the user; and  
4 wherein the computer-readable program code means for interrogating further comprises:  
5 computer-readable program code means for determining whether the user's calendar  
6 indicates that he is currently available for instant messaging, and if not, generating an automated  
7 response informing a sender of the instant message or requester of the instant messaging status of  
8 the user's current status using a currently-active context event for the user and, for particular  
9 context events, any currently-active specific event for the user.

1 Claim 6 (original): The computer program product according to Claim 5, wherein the automated  
2 response further comprises information regarding when the user is next available.

1       **Claim 7 (original):** The computer program product according to Claim 1, further comprising:  
2                    computer-readable program code means for detecting an incoming voice call for the user;  
3                    and  
4                    wherein the computer-readable program code means for interrogating further comprises:  
5                    computer-readable program code means for generating, if the user does not answer the  
6                    incoming voice call, an automated response informing a caller making the incoming voice call of  
7                    the user's current status using a currently-active context event for the user and, for particular  
8                    context events, any currently-active specific event for the user.

1       **Claim 8 (original):** The computer program product according to Claim 7, wherein the automated  
2                    response further comprises information regarding when the user is next available.

1       **Claim 9 (original):** The computer program product according to Claim 1, further comprising:

2                    computer-readable program code means for receiving a request for project management

3                    information; and

4                    wherein the computer-readable program code means for interrogating interrogates the  
5                    calendar events created for a plurality of users to provide information about the context events  
6                    and specific events scheduled for the users at a target date and a target time period, and further  
7                    comprising:

8                    computer-readable program code means for generating a response informing a requester  
9                    of the project management information of the information for the users at the target date and the

10 target time period using a result of the computer-readable program code means for interrogating.

1 Claim 10 (original): The computer program product according to Claim 9, wherein the request  
2 asks whether any team member is available at a particular location during a particular time period  
3 on a particular date.

1 Claim 11 (original): The computer program product according to Claim 1, wherein zero or more  
2 attribute values may be specified for each of the context events and each of the specific events.

1 Claim 12 (original): The computer program product according to Claim 11, wherein the  
2 computer-readable program code means for interrogating further comprises computer-readable  
3 program code means for interrogating the specified attributes of a context event and of any  
4 specific event that are applicable to a target date and a target time or target time period.

1 Claim 13 (original): The computer program product according to Claim 1, wherein zero or more  
2 attribute values may be specified for each of the context events and each of the specific events and  
3 further comprising:

4 computer-readable program code means for detecting an incoming electronic mail  
5 message for the user; and

6 wherein the computer-readable program code means for interrogating further comprises:  
7 computer-readable program code means for determining whether the user's calendar

8 indicates that he is currently available for checking his electronic mail, and if not, generating an  
9 automated response informing a sender of the electronic mail of the user's current status using a  
10 currently-active context event for the user, the specified attributes of the currently-applicable  
11 context event, any currently-active specific event for the user, and the specified attributes of any  
12 currently-applicable specific event.

1 Claim 14 (original): The computer program product according to Claim 13, wherein overrides  
2 may be specified for the attribute values and wherein the computer-readable program code means  
3 for interrogating further comprises computer-readable program code means for applying the  
4 overrides to the attribute values.

1 Claim 15 (original): The computer program product according to Claim 1, wherein zero or more  
2 attribute values may be specified for each of the context events and each of the specific events and  
3 further comprising:

4 computer-readable program code means for detecting an incoming instant message or  
5 request for instant messaging status for the user; and  
6 wherein the computer-readable program code means for interrogating further comprises:  
7 computer-readable program code means for determining whether the user's calendar  
8 indicates that he is currently available for instant messaging, and if not, generating an automated  
9 response informing a sender of the instant message or requester of the instant messaging status of  
10 the user's current status using a currently-active context event for the user, the specified attributes

11 of the currently-applicable context event, any currently-active specific event for the user, and the  
12 specified attributes of any currently-applicable specific event.

1 Claim 16 (original): The computer program product according to Claim 15, wherein overrides  
2 may be specified for the attribute values and wherein the computer-readable program code means  
3 for interrogating further comprises applying the overrides to the attribute values.

1 Claim 17 (original): The computer program product according to Claim 1, wherein zero or more  
2 attribute values may be specified for each of the context events and each of the specific events and  
3 further comprising:

4 computer-readable program code means for detecting an incoming voice call for the user;

5 and

6 wherein the computer-readable program code means for interrogating further comprises:

7 computer-readable program code means for generating, if the user does not answer the  
8 incoming voice call, an automated response informing a caller making the incoming voice call of  
9 the user's current status using a currently-active context event for the user, the specified attributes  
10 of the currently-applicable context event, any currently-active specific event for the user, and the  
11 specified attributes of any currently-applicable specific event.

1 Claim 18 (original): The computer program product according to Claim 17, wherein overrides  
2 may be specified for the attribute values and wherein the computer-readable program code means

3 for interrogating further comprises applying the overrides to the attribute values.

1 Claim 19 (original): The computer program product according to Claim 1, wherein zero or more  
2 attribute values may be specified for each of the context events and each of the specific events and  
3 further comprising:

4 computer-readable program code means for receiving a request for project management  
5 information for a target date and a target time period; and

6 wherein the computer-readable program code means for interrogating interrogates the  
7 calendar events created for a plurality of users to provide information about the context events  
8 and specific events scheduled for the users at the target date and the target time period, the  
9 specified attributes of scheduled context events, and the specified attributes of any scheduled  
10 specific events, and further comprising:

11 computer-readable program code means for generating a response informing a requester  
12 of the project management information of the information for the users using a result of the  
13 computer-readable program code means for interrogating.

1 Claim 20 (original): The computer program product according to Claim 19, wherein overrides  
2 may be specified for the attribute values and wherein the computer-readable program code means  
3 for interrogating further comprises applying the overrides to the attribute values.

1 Claim 21 (original): The computer program product according to Claim 1, wherein default

2 attribute values may be specified for context event types and for specific event types, and wherein  
3 a particular context event and/or a particular specific event may include attribute values which  
4 override the default attribute values.

1 Claim 22 (original): The computer program product according to Claim 11, wherein the attribute  
2 values include information on how to immediately contact the user.

1 Claim 23 (original): The computer program product according to Claim 11, wherein the attribute  
2 values include whether, and how often, the user checks electronic mail messages.

1 Claim 24 (original): The computer program product according to Claim 11, wherein the attribute  
2 values include whether the user is available for instant messaging.

1 Claim 25 (original): The computer program product according to Claim 11, wherein the attribute  
2 values include whether, and how often, the user checks voice mail messages.

1 Claim 26 (original): A system for providing an electronic calendar-driven application,  
2 comprising:  
3 means for creating calendar events on an electronic calendar, the calendar events being  
4 organized according to a multi-level hierarchy comprising context events at an upper level of the  
5 hierarchy and specific events at a lower level of the hierarchy, wherein zero or more specific

6 events may be scheduled on the electronic calendar during any particular context event; and  
7 means for interrogating the calendar events created for a user to provide information  
8 about the user at a point in time or for a period of time.

1 Claim 27 (original): The system according to Claim 26, further comprising means for  
2 automatically applying a default context during calendar periods when no other context event is  
3 active.

1 Claim 28 (original): The system according to Claim 26, further comprising:  
2 means for detecting an incoming electronic mail message for the user; and  
3 wherein the means for interrogating further comprises:  
4 means for determining whether the user's calendar indicates that he is currently available  
5 for checking his electronic mail, and if not, generating an automated response informing a sender  
6 of the electronic mail message of the user's current status using a currently-active context event  
7 for the user and, for particular context events, any currently-active specific event for the user.

1 Claim 29 (original): The system according to Claim 26, further comprising:  
2 means for detecting an incoming voice call for the user; and  
3 wherein the means for interrogating further comprises:  
4 means for generating, if the user does not answer the incoming voice call, an automated  
5 response informing a caller making the incoming voice call of the user's current status using a

6 currently-active context event for the user and, for particular context events, any currently-active  
7 specific event for the user.

1 Claim 30 (original): The system according to Claim 26, further comprising:  
2 means for receiving a request for project management information; and  
3 wherein the means for interrogating interrogates the calendar events created for a plurality  
4 of users to provide information about the context events and specific events scheduled for the  
5 users at a target date and a target time period, and further comprising:  
6 means for generating a response informing a requester of the project management  
7 information of the information for the users at the target date and the target time period using a  
8 result of the means for interrogating.

1 Claim 31 (original): The system according to Claim 30, wherein the request asks whether any  
2 team member is available at a particular location during a particular time period on a particular  
3 date.

1 Claim 32 (original): The system according to Claim 26, wherein zero or more attribute values  
2 may be specified for each of the context events and each of the specific events.

1 Claim 33 (original): The system according to Claim 32, wherein the means for interrogating  
2 further comprises means for interrogating the specified attributes of a context event and of any

3 specific event that are applicable to a target date and a target time or target time period.

1 Claim 34 (original): The system according to Claim 26, wherein zero or more attribute values  
2 may be specified for each of the context events and each of the specific events and further  
3 comprising:

4 means for detecting an incoming electronic mail message or an instant message for the  
5 user; and

6 wherein the means for interrogating further comprises:

7 means for determining whether the user's calendar indicates that he is currently available  
8 for checking his electronic mail or available for instant messaging, and if not, generating an  
9 automated response informing a sender of the electronic mail message or the instant message of  
10 the user's current status using a currently-active context event for the user, the specified attributes  
11 of the currently-applicable context event, any currently-active specific event for the user, and the  
12 specified attributes of any currently-applicable specific event.

1 Claim 35 (original): The system according to Claim 26, wherein zero or more attribute values  
2 may be specified for each of the context events and each of the specific events and further  
3 comprising:

4 means for detecting an incoming voice call for the user; and

5 wherein the means for interrogating further comprises:

6 means for generating, if the user does not answer the incoming voice call, an automated

7 response informing a caller making the incoming voice call of the user's current status using a  
8 currently-active context event for the user, the specified attributes of the currently-applicable  
9 context event, any currently-active specific event for the user, and the specified attributes of any  
10 currently-applicable specific event.

1 Claim 36 (original): The system according to Claim 26, wherein zero or more attribute values  
2 may be specified for each of the context events and each of the specific events and further  
3 comprising:

4 means for receiving a request for project management information for a target date and a  
5 target time period; and

6 wherein the means for interrogating interrogates the calendar events created for a plurality  
7 of users to provide information about the context events and specific events scheduled for the  
8 users at the target date and the target time period, the specified attributes of currently-applicable  
9 context events, and the specified attributes of any currently-applicable specific events, and further  
10 comprising:

11 means for generating a response informing a requester of the project management  
12 information of the information for the users using a result of the means for interrogating.

1 Claim 37 (original): The system according to Claim 26, wherein default attribute values may be  
2 specified for context event types and for specific event types, and wherein a particular context  
3 event and/or a particular specific event may include attribute values which override the default

4 attribute values.

1 Claim 38 (original): The system according to Claim 32, wherein the attribute values include  
2 information on how to immediately contact the user.

1 Claim 39 (original): The system according to Claim 32, wherein the attribute values include  
whether, and how often, the user checks electronic mail messages.

1 Claim 40 (original): The system according to Claim 32, wherein the attribute values include  
2 whether, and how often, the user checks voice mail messages.

1 Claim 41 (original): A method for providing an electronic calendar-driven application,  
2 comprising the steps of:

3 creating calendar events on an electronic calendar, the calendar events being organized  
4 according to a multi-level hierarchy comprising context events at an upper level of the hierarchy  
5 and specific events at a lower level of the hierarchy, wherein zero or more specific events may be  
6 scheduled on the electronic calendar during any particular context event; and

7 interrogating the calendar events created for a user to provide information about the user.

1 Claim 42 (original): The method according to Claim 41, further comprising the step of  
2 automatically applying a default context during calendar periods when no other context event is

3 active.

1 **Claim 43 (original):** The method according to Claim 41, further comprising the step of:  
2       detecting an incoming electronic mail message or an instant message for the user; and  
3       wherein the interrogating step further comprises the step of:  
4       determining whether the user's calendar indicates that he is currently available for  
5       checking his electronic mail or available for instant messaging, and if not, generating an  
6       automated response informing a sender of the electronic mail message or the instant message of  
7       the user's current status using a currently-active context event for the user and, for particular  
8       context events, any currently-active specific event for the user.

1 **Claim 44 (original):** The method according to Claim 41, further comprising the step of:  
2       detecting an incoming voice call for the user; and  
3       wherein the interrogating step further comprises the steps of:  
4       generating, if the user does not answer the incoming voice call, an automated response  
5       informing a caller making the incoming voice call of the user's current status using a currently-  
6       active context event for the user and, for particular context events, any currently-active specific  
7       event for the user.

1 **Claim 45 (original):** The method according to Claim 41, further comprising the step of:  
2       receiving a request for project management information; and

3 wherein the interrogating step interrogates the calendar events created for a plurality of  
4 users to provide information about the context events and specific events scheduled for the users  
5 at a target date and a target time period, and further comprising the step of:

6 generating a response informing a requester of the project management information of the  
7 information for the users at the target date and the target time period using a result of the  
8 interrogating step.

1 Claim 46 (original): The method according to Claim 45, wherein the request asks whether any  
2 team member is available at a particular location during a particular time period on a particular  
3 date.

1 Claim 47 (original): The method according to Claim 41, wherein zero or more attribute values  
2 may be specified for each of the context events and each of the specific events.

1 Claim 48 (original): The method according to Claim 47, wherein the interrogating step further  
2 comprises interrogating the specified attributes of a context event and of any specific event that  
3 are applicable to a target date and a target time or target time period.

1 Claim 49 (original): The method according to Claim 41, wherein zero or more attribute values  
2 may be specified for each of the context events and each of the specific events and further  
3 comprising the step of:

4                   detecting an incoming electronic mail message for the user; and  
5                   wherein the interrogating step further comprises the steps of:  
6                   determining whether the user's calendar indicates that he is currently available for  
7                   checking his electronic mail, and if not, generating an automated response informing a sender of  
8                   the electronic mail message of the user's current status using a currently-active context event for  
9                   the user, the specified attributes of the currently-applicable context event, any currently-active  
10                  specific event for the user, and the specified attributes of any currently-applicable specific event.

1                   Claim 50 (original): The method according to Claim 41, wherein zero or more attribute values  
2                   may be specified for each of the context events and each of the specific events and further  
3                   comprising the step of:

4                   detecting an incoming voice call for the user; and  
5                   wherein the interrogating step further comprises the step of:  
6                   generating, if the user does not answer the incoming voice call, an automated response  
7                   informing a caller making the incoming voice call of the user's current status using a currently-  
8                   active context event for the user, the specified attributes of the currently-applicable context event,  
9                   any currently-active specific event for the user, and the specified attributes of any currently-  
10                  applicable specific event.

1                   Claim 51 (original): The method according to Claim 41, wherein zero or more attribute values  
2                   may be specified for each of the context events and each of the specific events and further

3 comprising the step of:

4 receiving a request for project management information for a target date and a target time  
5 period; and

6 wherein the interrogating step interrogates the calendar events created for a plurality of  
7 users at the target date and the target time period to provide information about the context events  
8 and specific events scheduled for the users, the specified attributes of currently-applicable context  
9 events, and the specified attributes of any currently-applicable specific events, and further  
10 comprising:

11 generating a response informing a requester of the project management information of the  
12 information for the users using a result of the interrogating step.

1  Claim 52 (original): The method according to Claim 41, wherein default attribute values may be  
2 specified for context event types and for specific event types, and wherein a particular context  
3 event and/or a particular specific event may include attribute values which override the default  
4 attribute values.

1 Claim 53 (original): The method according to Claim 47, wherein the attribute values include  
2 information on how to immediately contact the user.

1 Claim 54 (original): The method according to Claim 47, wherein the attribute values include  
2 information on an alternative contact person for the user.

1 Claim 55 (original): The method according to Claim 47, wherein the attribute values include  
2 whether, and how often, the user checks electronic mail messages.

1 Claim 56 (original): The method according to Claim 47, wherein the attribute values include  
2 whether, and how often, the user checks voice mail messages.

1 Claim 57 (original): The method according to Claim 41, wherein the interrogating step further  
2 comprises interrogating a specific event that is applicable to a target date and a target time or  
3 target time period.

1 Claim 58 (new): The method according to Claim 43, wherein a level of detail provided in the  
2 automated response varies, based on an identification of a sender of the incoming electronic mail  
3 message or instant message.

1 Claim 59 (new): The method according to Claim 41, wherein the interrogating step further  
2 comprises the step of analyzing selected ones of the specific events for the user.

1 Claim 60 (new): The method according to Claim 41, wherein interrogating step further comprises  
2 the step of analyzing selected ones of the context events for the user.

1      Claim 61 (new): The method according to Claim 41, wherein the interrogating step further  
2      comprises the step of analyzing selected ones of the attribute values for the user.
